Connecting the V for a Connected World

Robert Karban

Jet Propulsion Laboratory, California Institute of Technology

Austrian Software Day, Sep 29 2020, Vienna, Austria

Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise, does not constitute or imply its endorsement by the United States Government or the Jet Propulsion Laboratory, California Institute of Technology.

The views and opinions of contributors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof.

Who is Robert?

- CAE Systems and Software Environment
Chief Engineer at JPL
- Member of INCOSE, SysML RTF, SysMLv2
- Formerly Control System/Software Engineer and Architect at:
 - European Southern Observatory (ESO)
– Germany, Chile
 - CERN – Switzerland/France
 - Siemens Healthcare - Austria
- M.Sc. Computer Science (Austria)

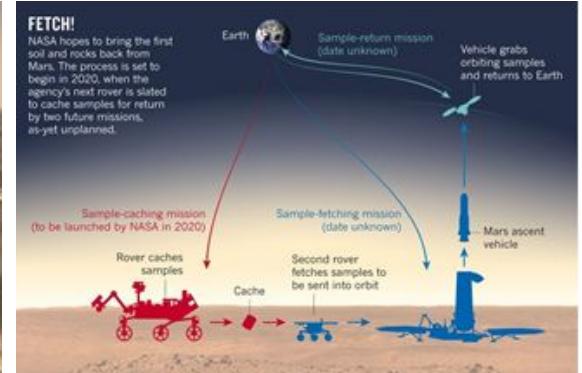

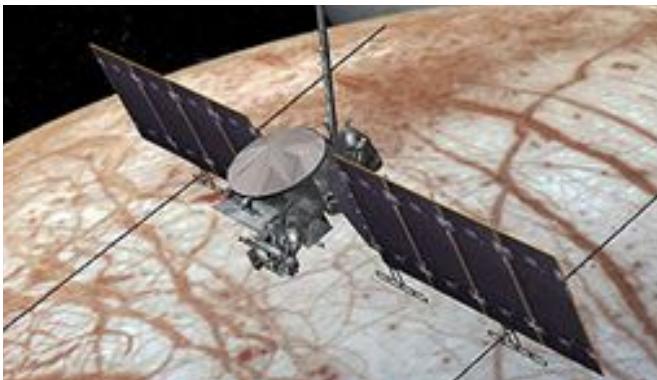

Telescopes and Instruments Robert worked on (~20 FTEs)

- 4 x Very Large Telescope – 8m
- 4 x Auxiliary Telescope – 1.8m
- 1 x Very Large Interferometer – 130m - 200m
- 2 x Survey Telescope – 4m
- 55 x Radio Telescope – 12m - 15m
- 1 x 3.6m Telescope – 3.6m
- PRIMA and APE instruments
- 1 x NTT – 4m
- 1 x ELT – 39m
- 1 x TMT – 30m

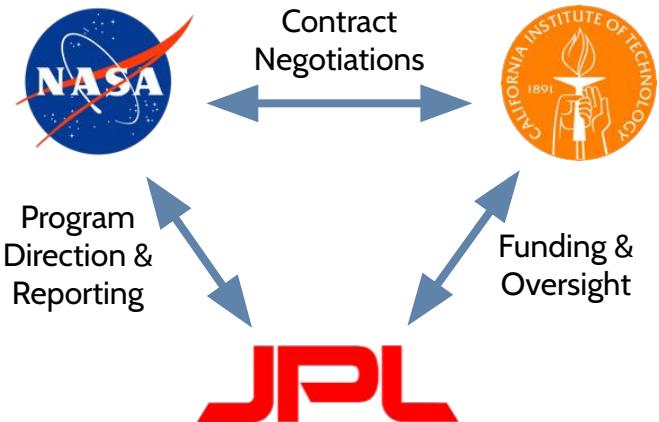

Space Missions

- Europa Clipper
- Europa Lander Mission Concept
- M2020
- Planned Mars Sample Return
- Psyche

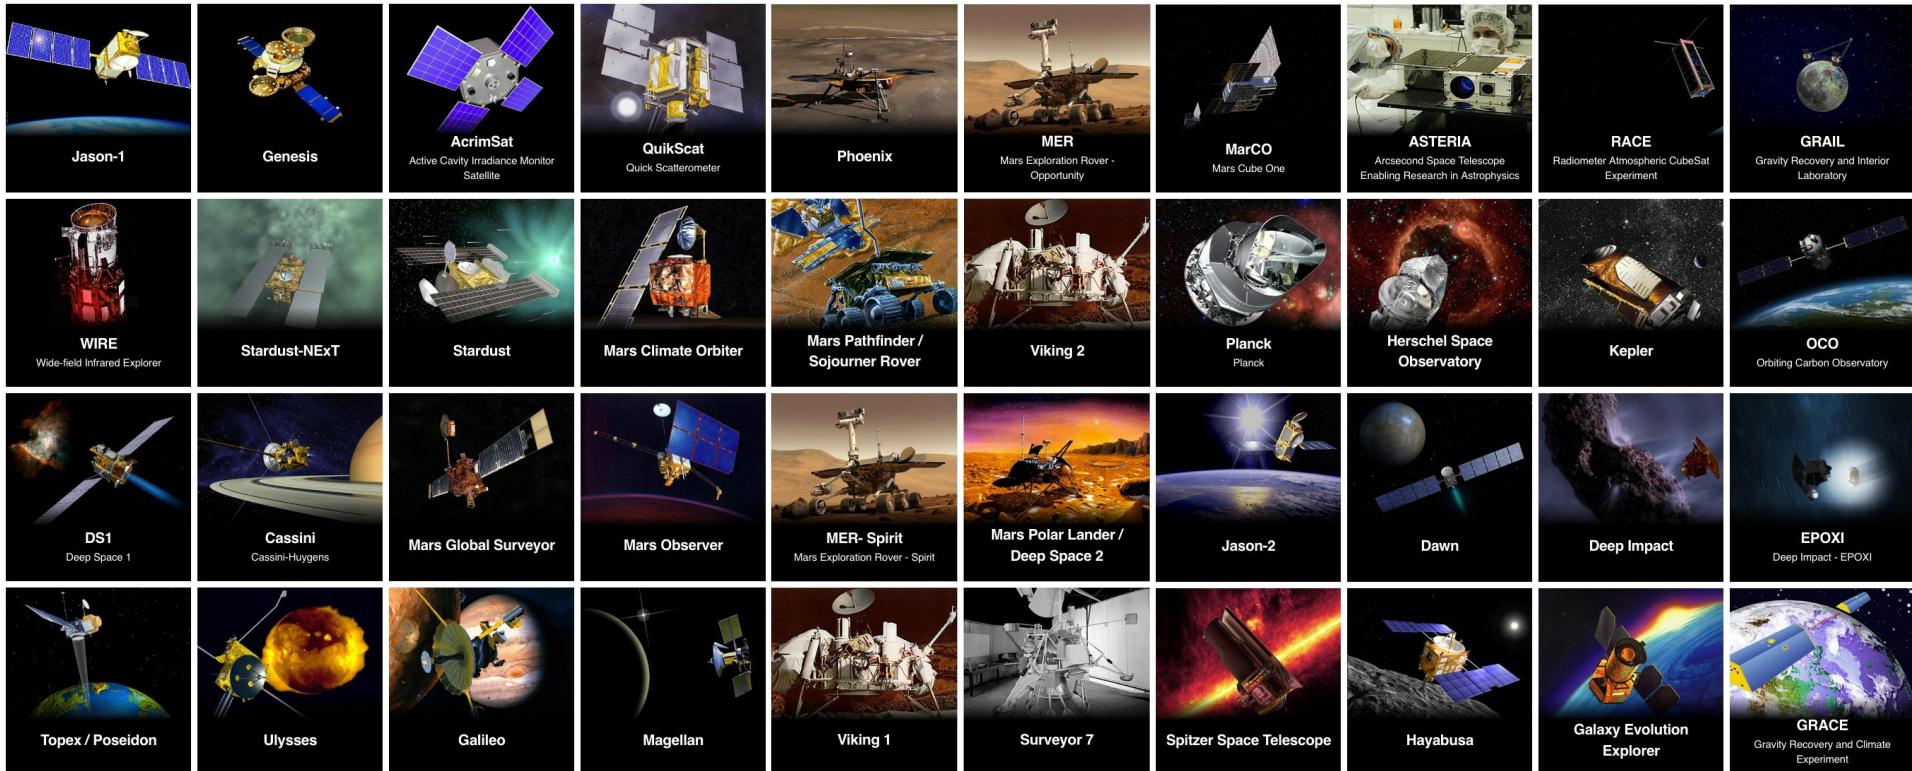

NASA Jet Propulsion Laboratory

- Located in Pasadena, CA
- NASA-owned “*Federally-Funded Research and Development Center*”
- University-operated
- ~6,000 employees

JPL Campus in Pasadena, CA

Past Missions

Current Missions

Some Notable Firsts

Surveyor 1, First soft landing on the moon

Viking, first landing on another planet

Voyager 1, First interstellar traveler

Continuous presence on Mars since 1997

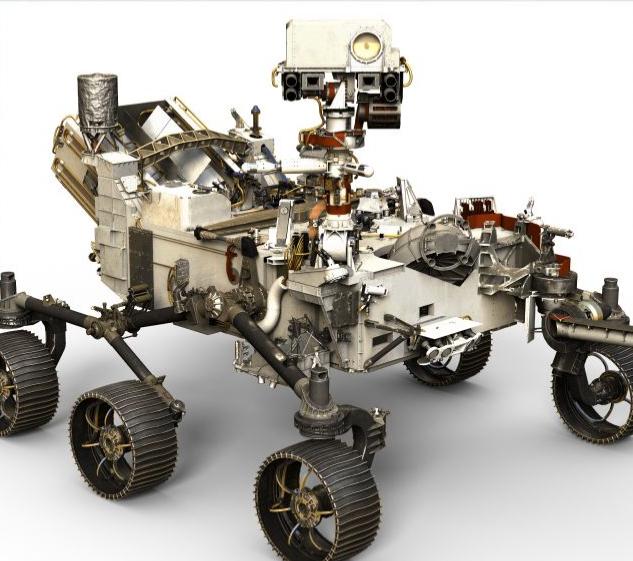

Systems and Software Engineering at JPL

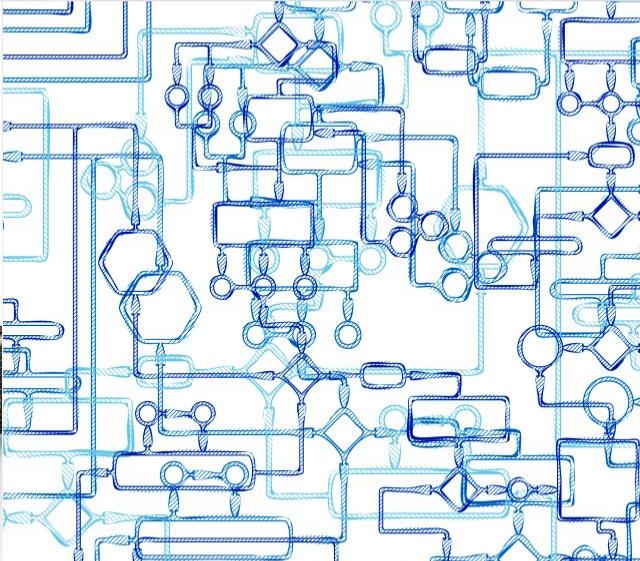

**Systems Engineers guide the
concurrent collaborative design
of complex technical systems**

Leadership

**Architect and Design
Cyber-Physical Systems**

Manage Complexity

Flight project teams are large

A project starts simple

Engineers iterate on their models

Systems engineers enter this data into their rollup

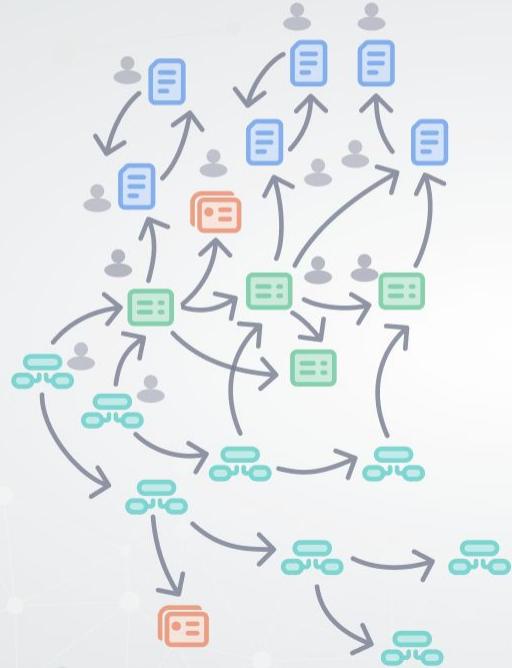

They add it to a document and get inputs from others

And add it to a spreadsheet to track it over time

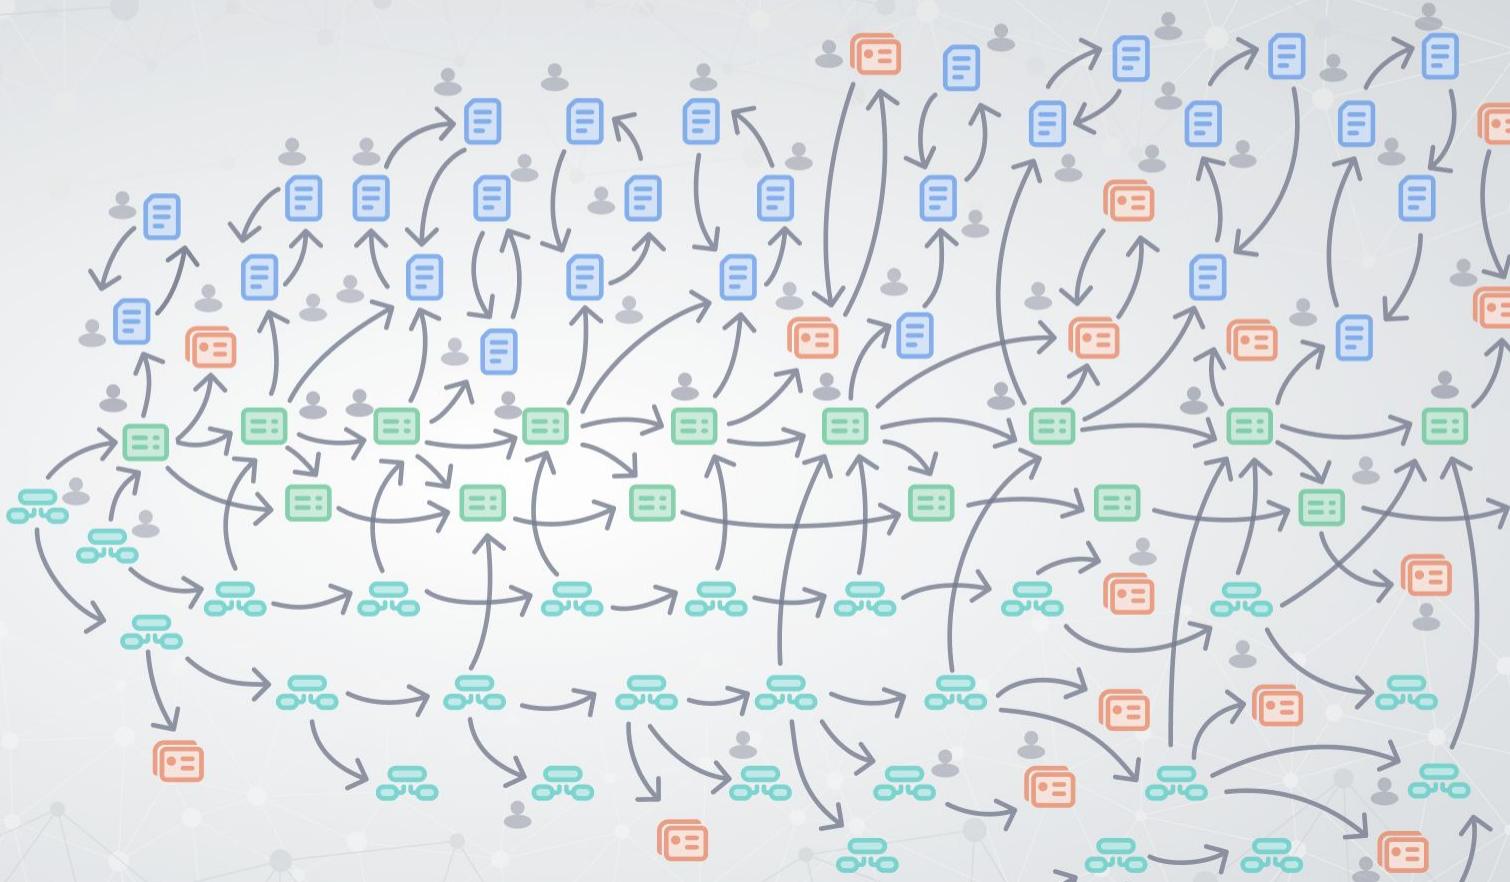

It can get complicated quickly

It can get complicated quickly

It can get complicated quickly

And become overwhelming...

**Using engineers as information
janitors isn't the best use of
their skill.**

JPL Systems Engineer

Real engineering vs. overhead

Repetitive Data Entry

Version Confusion

Constant Searching

Topic: Model Based Engineering

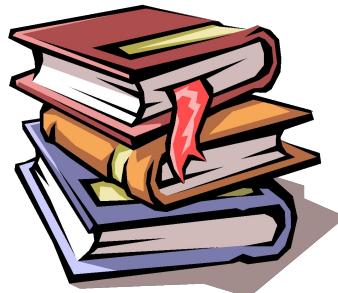

Making models the engineering driver

Model Based Systems Engineering

- MBSE is the formalized application of modeling techniques to support system requirements, design, analysis, verification, validation and documentation activities
- MBSE expresses a system using a Systems Modeling Language (e.g. SysML)
- MBSE is often applied with a method like Object Oriented System Engineering Method (OOSEM)

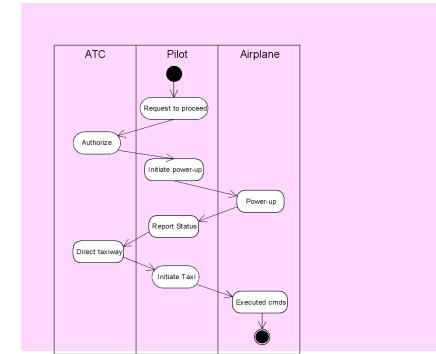

Vision from early 2000s

Present

- Specifications
- Interface requirements
- System design

Future

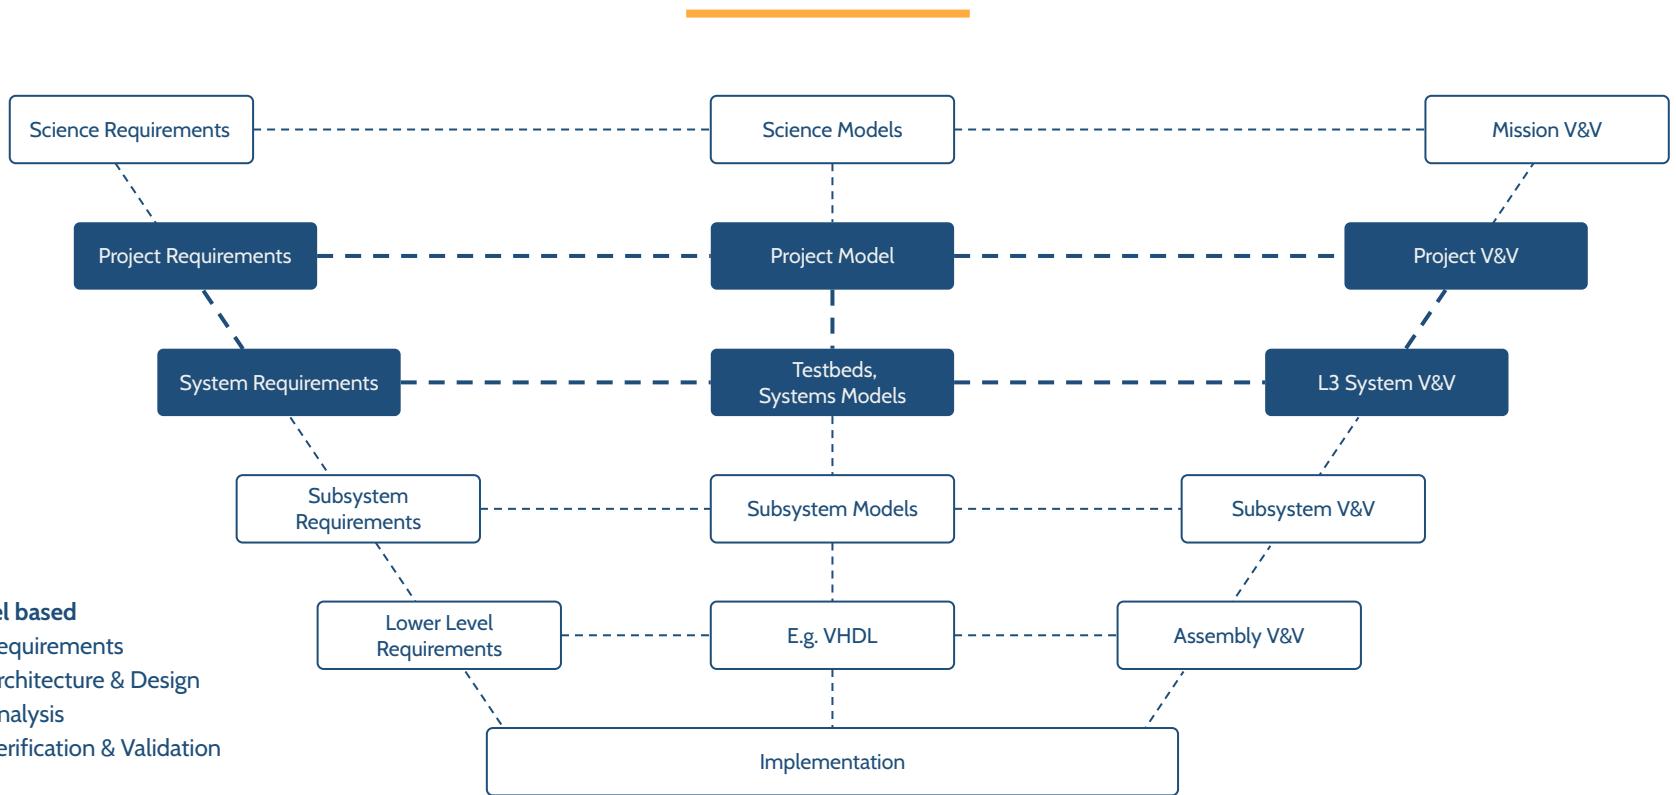

Moving from Document centric to Model centric

**“The chains of problem are too weak
to be felt until they are too strong to
be broken”**

Connected information, connected engineers

MBSE along the V-Model

Topic: Engineers as Humans

Ux Design

Human Challenges

- Cultural Resistance
- Systemic Process Impact
- No Users - The Risk of Failure

Incorporating the Engineers

- Empathy
- Human Centered Design
- Incremental Improvement

Who We Are

What We Do

Provide

Get the software you need to help you focus on doing amazing things.

Communicate

Get your questions answered and requests addressed. Reach out to CAE at any time.

Support

Receive maintenance, upgrades and patches. Your application needs are supported.

Integrate

Use applications that are well integrated and tested. We will make sure they work together.

JPL OpenCAE

Computer Aided Engineering (CAE) supports engineers at JPL by providing and maintaining shared and connected environments of apps and services for engineering.

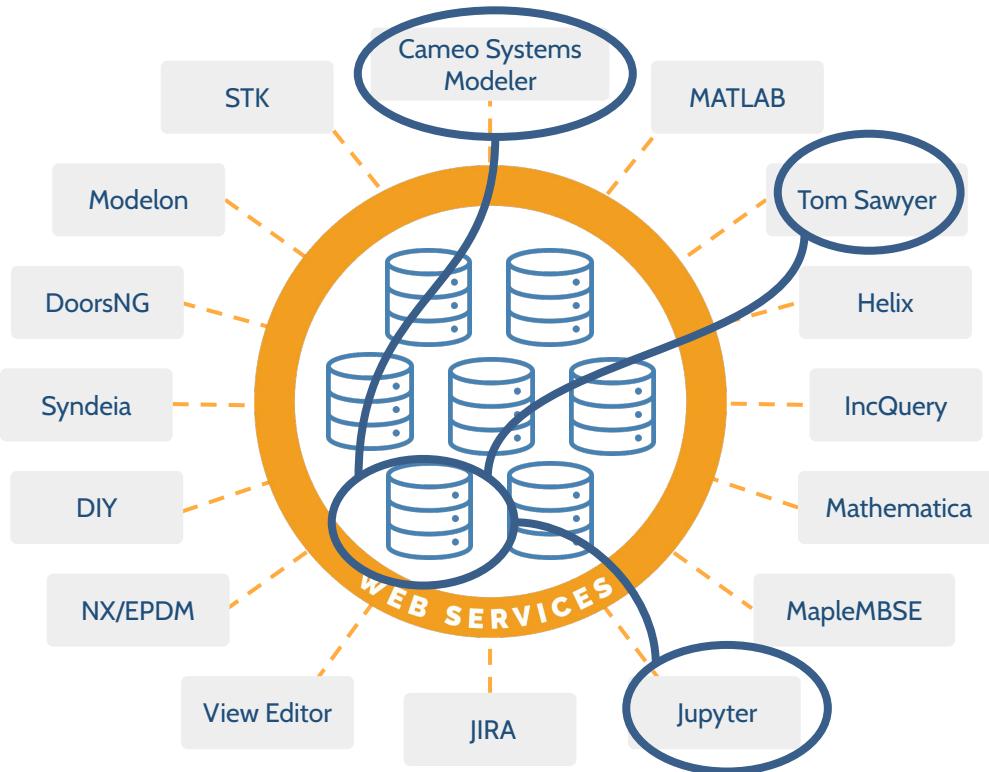

CAE System and Software Environments Connect Engineering Products

Engineering data can be retrieved and used in many engineering products by connecting to the authoritative source of truth

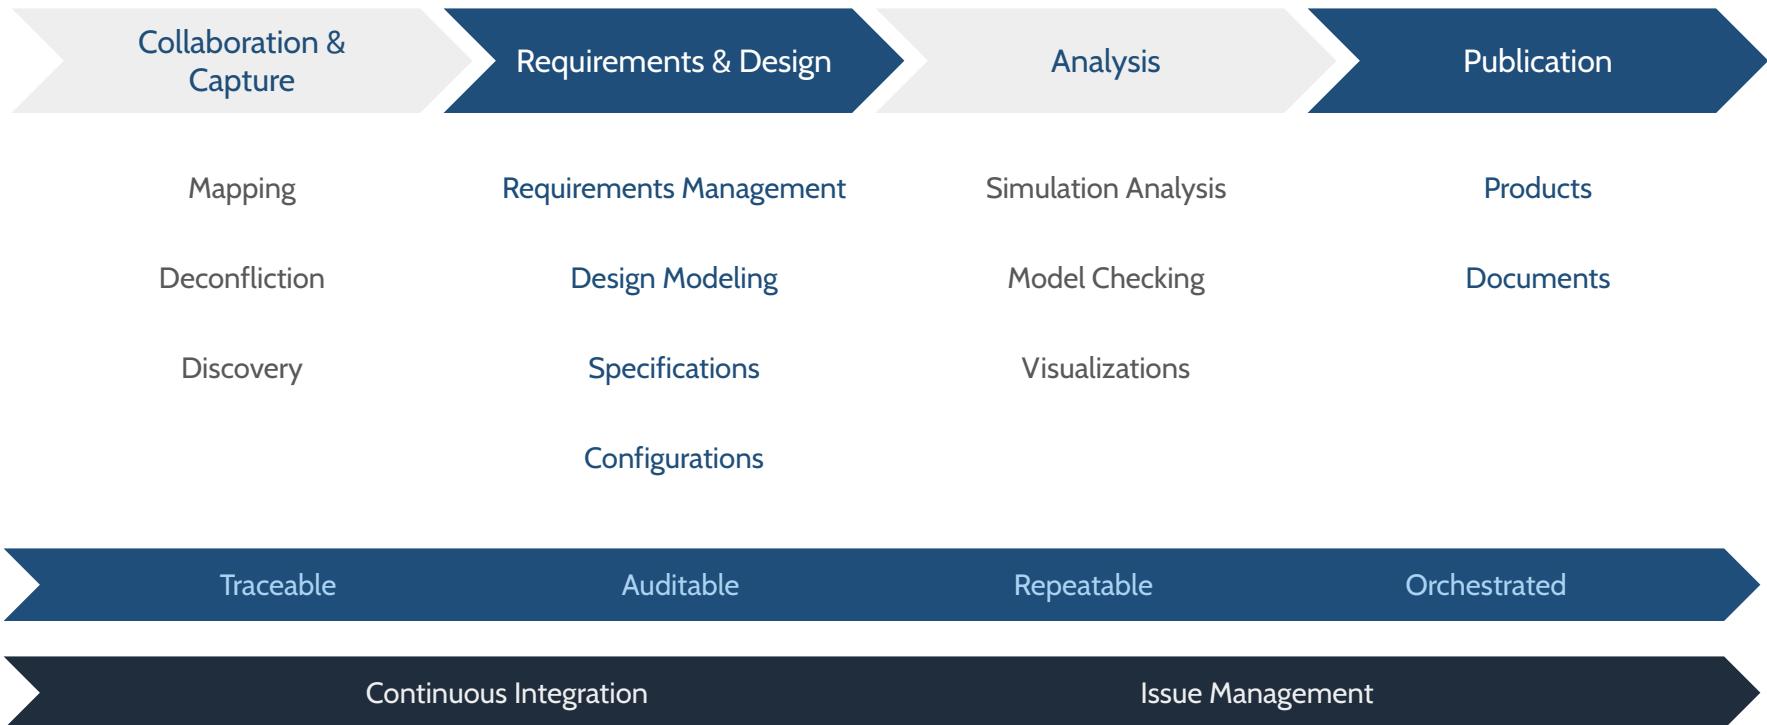

CAE Systems Environment - Architectural Principles

- Multi-paradigm modeling (polyglot) environment
- Best of Breed vs. All-in-One
- Bringing value to the user

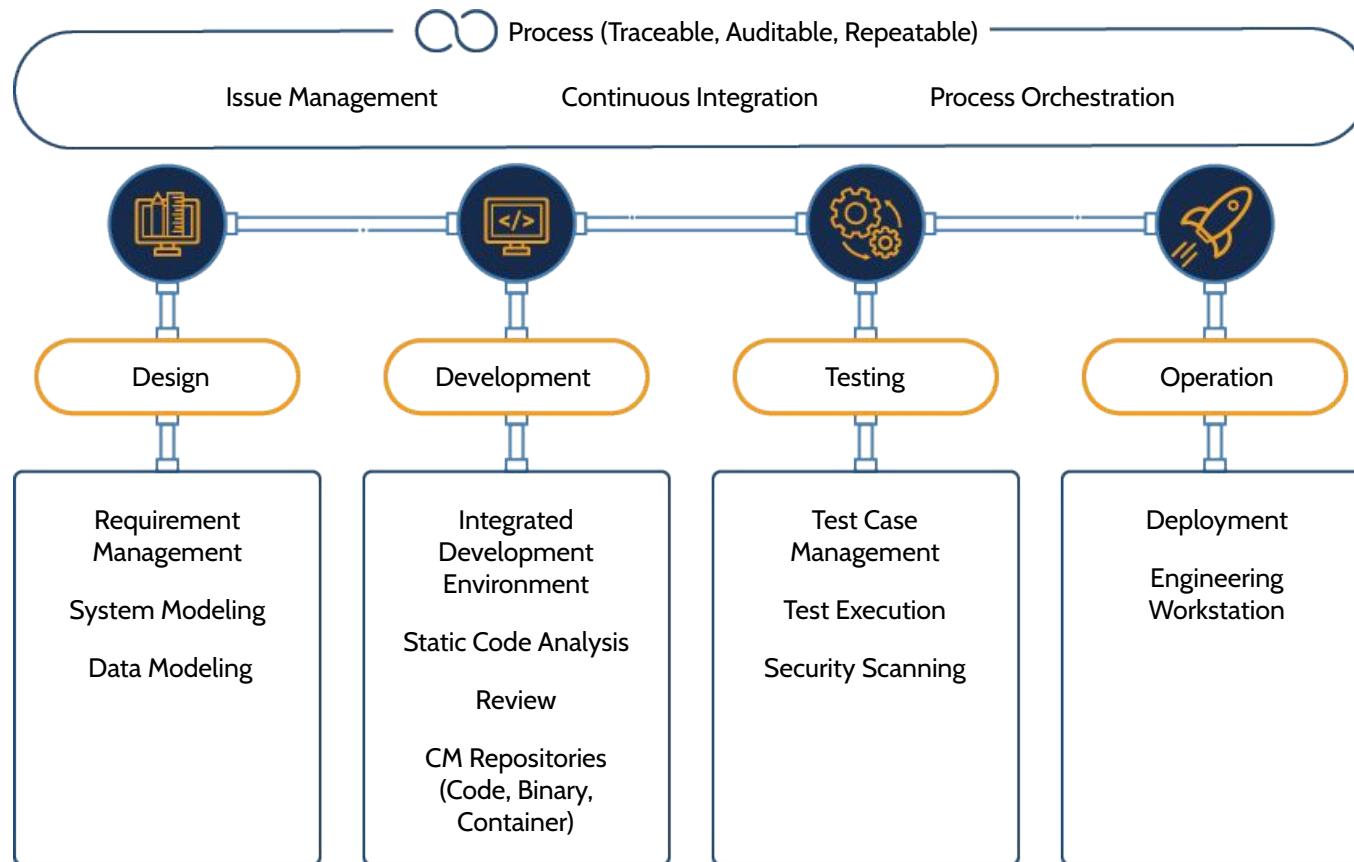

Systems Environment model data repositories are accessible via applications connected through a layer of web services.

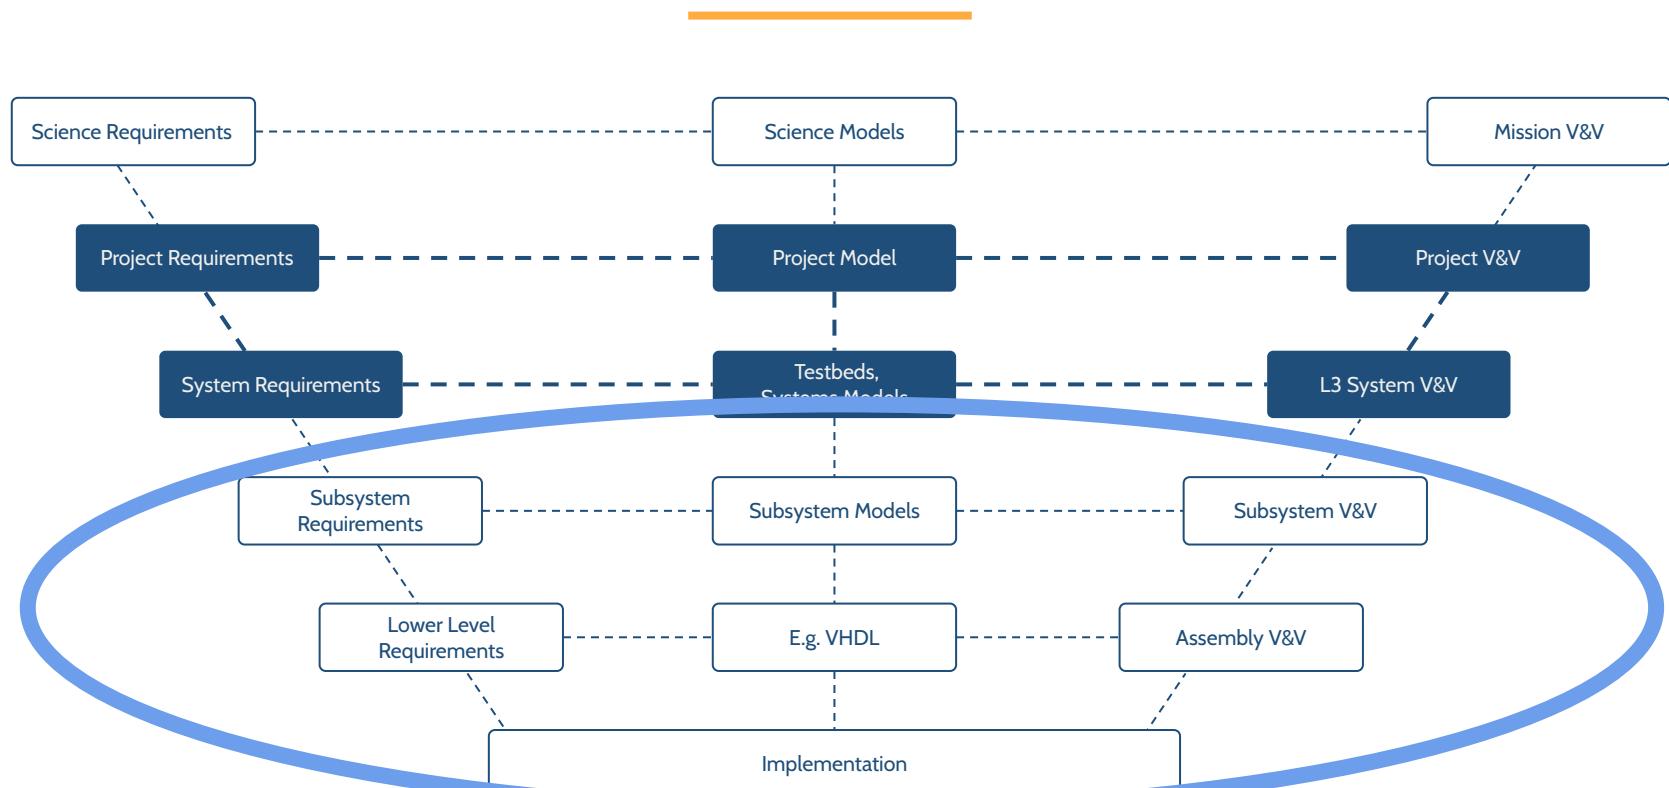

OpenCAE Systems Environment supports a range of capabilities in an Integrated Pipeline:

We offer a Software Environment pipeline

Transition from Systems Engineering to SW Engineering

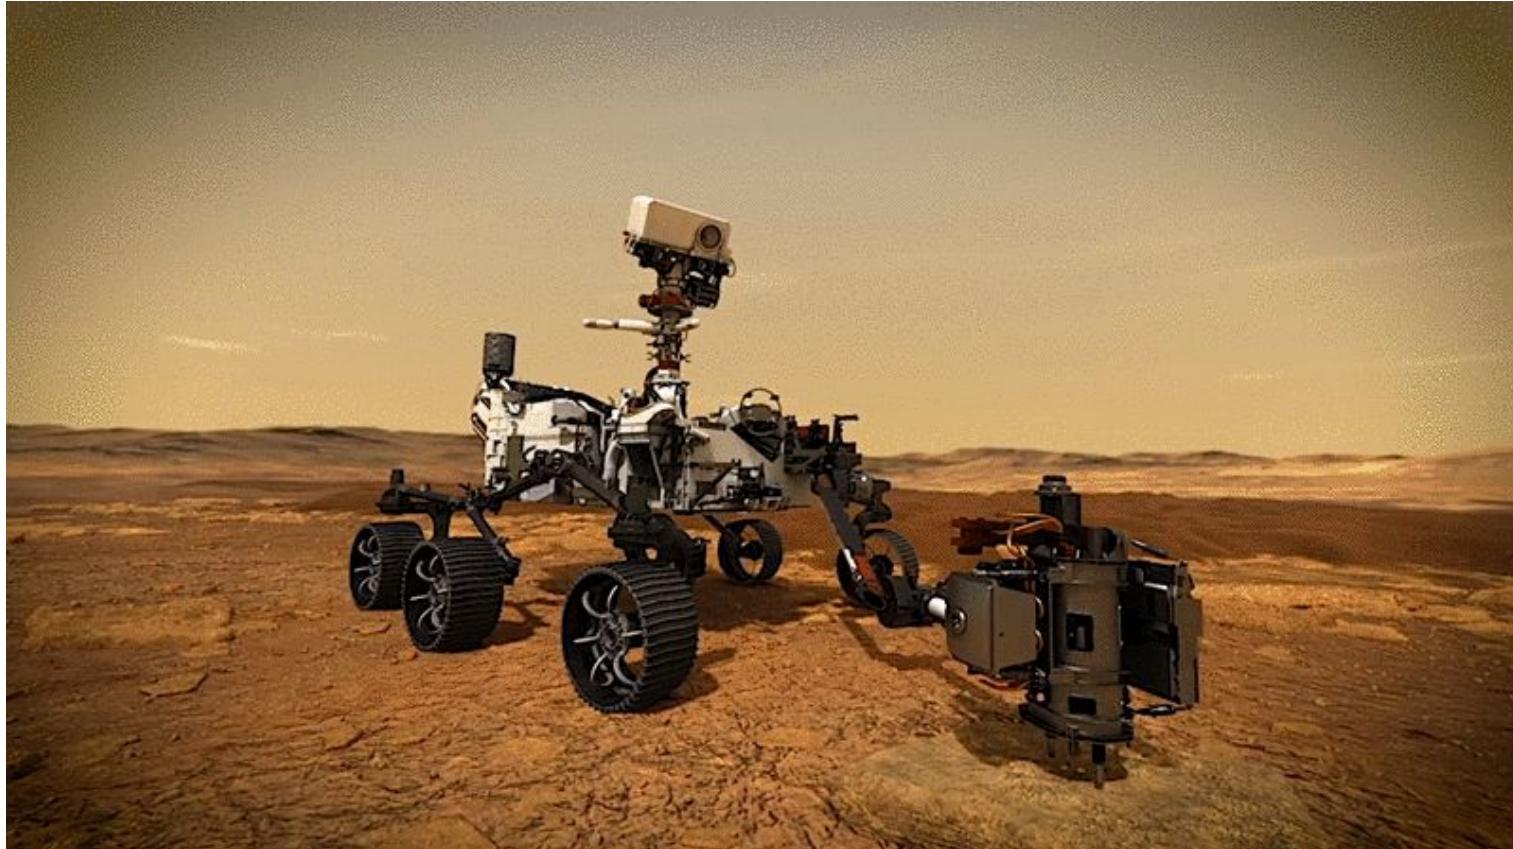

Topic: Enabling Technology

Bridging SE and people with models and data

Test Procedures

The screenshot shows a Jupyter Notebook interface with the title "jupyter Procedure_Template_Example1" and a status bar indicating "Last Checkpoint: a few seconds ago (autosaved)". The notebook contains a table of contents and several sections of executable code.

Table of Contents:

- 1: Example of End to End Jupyter Procedure
 - 1.1 Save Notebook as an arun
 - 1.2 Safety Note and Hardware Configuration
 - 1.2.1 Warnings and Cautions
 - 1.2.2 Scope
 - 1.2.3 Test Configuration
 - 1.2.4 Prerequisites
 - 1.2.5 Hazardous Operations
 - 1.2.6 Location of Operation
 - 1.3 TEST REQUIREMENTS
 - 1.3.1 Personnel
 - 1.3.2 Hardware Under Test
 - 1.3.3 Required Equipment
 - 1.3.3.1 Support Equipment
 - 2: PREPARATION
 - 2.1 Blocker/Special Instruction Check
 - 2.2 Confirm Sequences
 - 2.3 Verify Cabling Connections
 - 2.4 Verify Cabling Connections
 - 2.5 Verify Data Folder
 - 2.6 Verify GUI
 - 2.7 Open Launch GUI
 - 2.8 Startup Camera Software
 - 2.9 Camera Control Software
 - 2.10 Execute Startup/Restart
 - 2.11 Read Database Fields
 - 2.12 Write Database Information
 - 2.13 Verify Current State of Hardware
 - 2.14 Capture Various Temperatures
 - 2.15 Verify Nominal State of the Chamber
 - 3: TEST Operations
 - 3.1 Test Activities
 - 3.1.1 Open Camera Test Procedure
 - 3.1.2 Pre-Run Checks
 - 3.1.3 Startup and Initial Configuration
 - 3.3 Test Closeout
 - 3.3.1 Stop Camera and Write File to Hard Disk
 - 3.3.2 Close Camera
 - 3.3.3 Update Database with Test Session Information
 - 3.3.4 Closeout iBAT Steps
 - 3.3.5 Save and Close Jupyter
 - APPENDIX

**CODE IS EXECUTABLE
APPEARS IN-LINE WITH OTHER CONTENT**

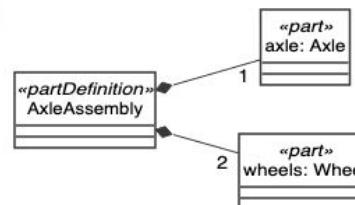

SysML v2 Key Elements

- New metamodel that is not constrained by UML
 - Grounded in formal semantics
- Robust visualizations based on flexible view & viewpoint specification and execution
 - graphical, tabular, textual
- Standardized API to access the model

JPL Vision - Dare Mighty Things

- Pursue long-term scientific Quests with a diverse and bold portfolio of missions
- Push the limits of space exploration technology by developing and fielding ever more capable autonomous robotic systems
- Strengthen our core expertise while developing and maintaining strategic partnerships with other NASA centers, U.S. national laboratories, academia, industry, and our international partners
- Build a robust Laboratory of the future that fosters a culture of innovation, openness, and inclusiveness
- Transform our systems to promote easier collaboration and information sharing
- Strengthen our end-to-end mission capabilities and accelerate the infusion of new technologies and capabilities into our future missions
- Inspire the world through our stories and our journey into space
- Support American leadership in space and as we Dare Ever Mightier Things

JPL Vision - Seven Quests

- Understand how Earth works as a system and how it is changing
- Help pave the way for human exploration of space
- Understand how our Solar System formed and how it is evolving
- Understand how life emerged on Earth and possibly elsewhere in our Solar System
- Understand the diversity of planetary systems in our Galaxy
- Understand how the Universe began and how it is evolving
- Use our unique expertise to benefit the nation and planet Earth

The JPL Systems Environment is widely used across

Category	Number	Notes

NAVAIR Model-Based Acquisition Strategy

- Surrogate Pilot RFP delivered to NAVAIR
- Data Item Descriptions (DIDs)
- Contract Data Requirements List (CDRL)

A screenshot of the "Surrogate Pilot RFP Response in View Editor" software interface. It shows a navigation tree on the left with categories like "Business", "Technical Description", and "Requirements". In the center, there is a 3D model of a propeller-driven aircraft labeled "Tiltrotor/CRStructure".

A screenshot of the "Transform CDRLs and DIDS using Digital Signoff in Model Through View Editor" software interface. It shows a document titled "1 Introduction" with sections like "1.1 Overview", "1.2 Scope", and "1.3 Objectives". A blue arrow points from the text "1) Enable Editing" to the "Edit" button in the toolbar. Another blue arrow points from the text "2) Add Risk" to the "Risk" button. A third blue arrow points from the text "3) Add Approval Status" to the "Approval Status" section. At the bottom right, a note says "Digital Signoff get 'pushed' back into Model (continuing theme of AST)".

JPL Vision – Seven Quests

- Understand how Earth works as a system and how it is changing
- Help pave the way for human exploration of space
- Understand how our Solar System formed and how it is evolving
- Understand how life emerged on Earth and possibly elsewhere in our Solar System
- Understand the diversity of planetary systems in our Galaxy
- Understand how the Universe began and how it is evolving
- Use our unique expertise to benefit the nation and planet Earth

JPL Vision – Dare Mighty Things

- Push the limits of space exploration technology by developing and fielding ever more capable autonomous robotic systems
- Transform our systems to promote easier collaboration and information sharing
- Strengthen our end-to-end mission capabilities and accelerate the infusion of new technologies and capabilities into our future missions

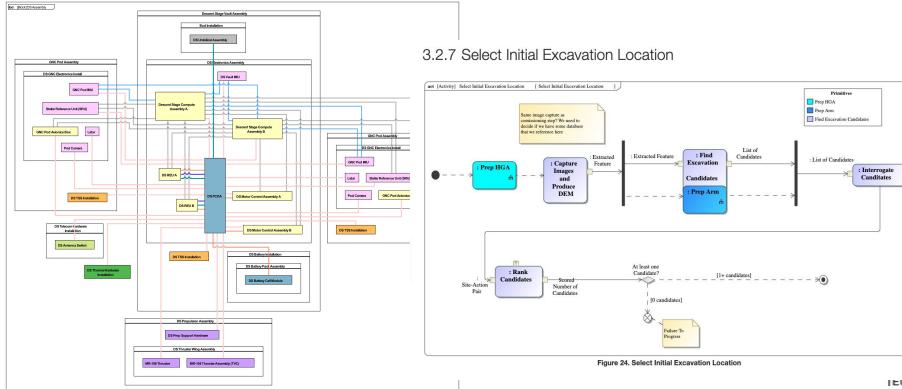

Example: Europa Lander uses Systems Environment

- **Need:**

- Generate orderly and Compositional System Design, System Block Diagram, PEL, Operational Scenarios from a system model describing the Lander
- SE products should never be out of sync with the system model

- **Approach:**

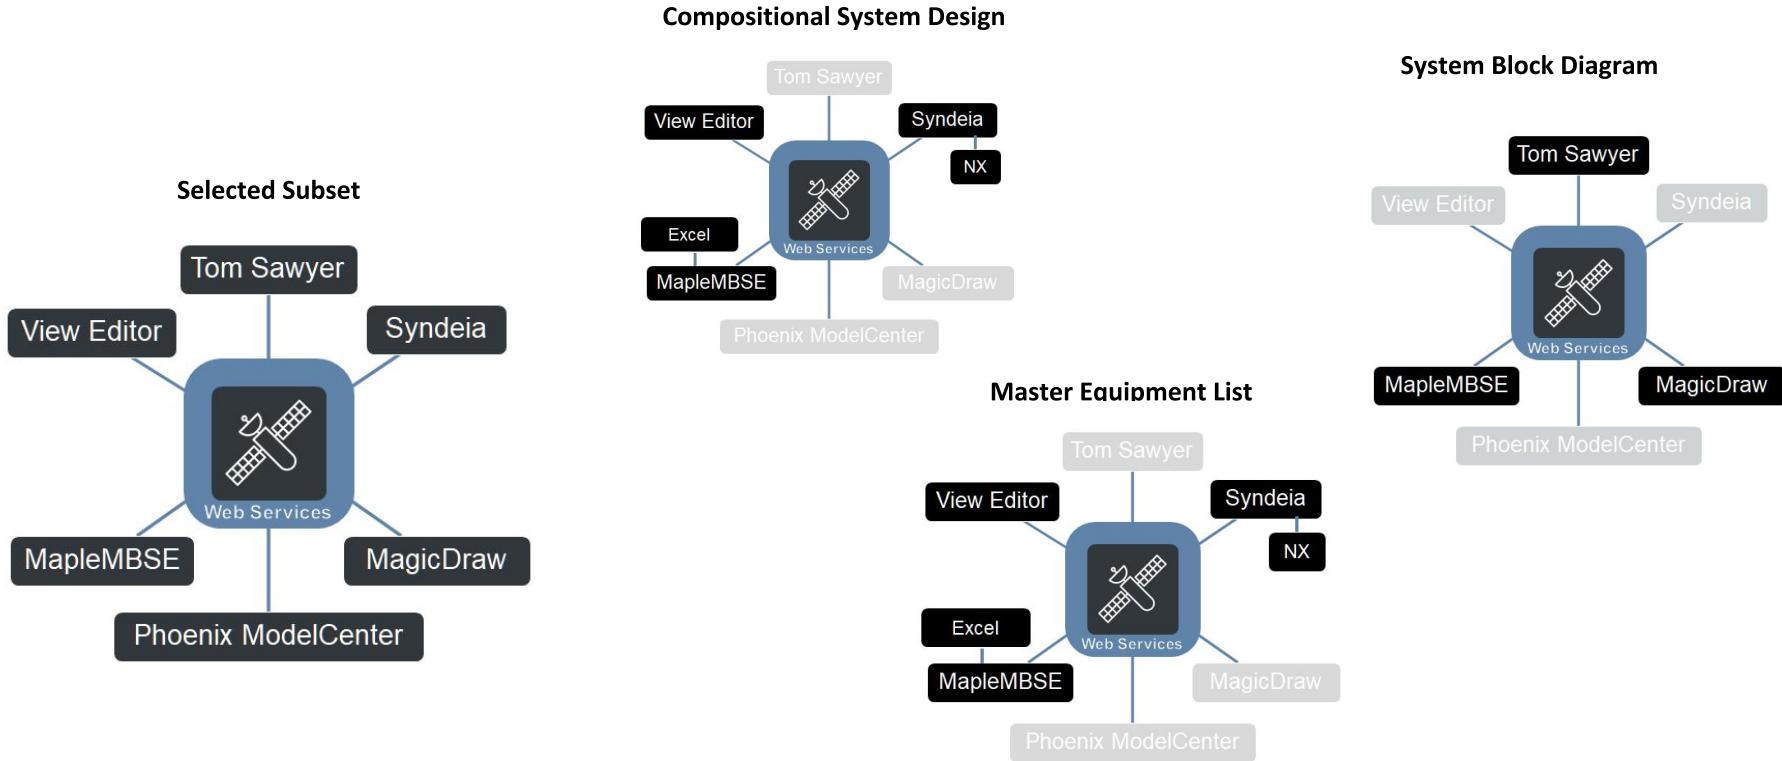

- Leverage Tom Sawyer and MapleMBSE
- Supply requirements directly from the project to the vendor
- Coordinate with CAE development team on the use case for Tom Sawyer integration with DocGen and View Editor

europalaander Vehicle

Europa Lander Environment Adaptation Examples

Test Procedures

The following steps will prepare the hardware and setup the test configuration.

Run each of the following Steps to execute and sign them off.

The first step is to save this notebook in the asrun folder. Select Save As and manually enter the file path.

2.1 Blocker/Special Instruction Check

Review the most recent shift notes and Jira dashboard for any blockers or special instructions potentially needed before executing Startup.

Jira Dashboard here: <https://jira.lsl.nasa.gov/secure/Dashboard.jspa?selectPageId=21422>

2.2 Confirm Sequences

Confirm that any sequences needed for this procedure are approved and merged. Review pull requests in github to check for this.

Seq Repo: <https://github.lsl.nasa.gov/m2020-ssev-seas/omxlt/ois>

2.3 Verify Cabling Connections

Verify that all blue boxes and cabling are properly mated.

Signoff

User1
2020-5-6 @ 12:25:12

2.4 Verify Cabling Connections

Verify that all blue boxes and cabling are properly mated.

2.5 Verify Data Folder

Verify folder exists at the following location with naming convention: YYYYMMDD_SCSTNNNData_Test ID. Use the template folder to create this directory if needed:

\\\00_DATA\0.1_Test_Data\

**USER CAN RE-RUN STEP
JOURNAL IS AUTOMATICALLY CREATED**

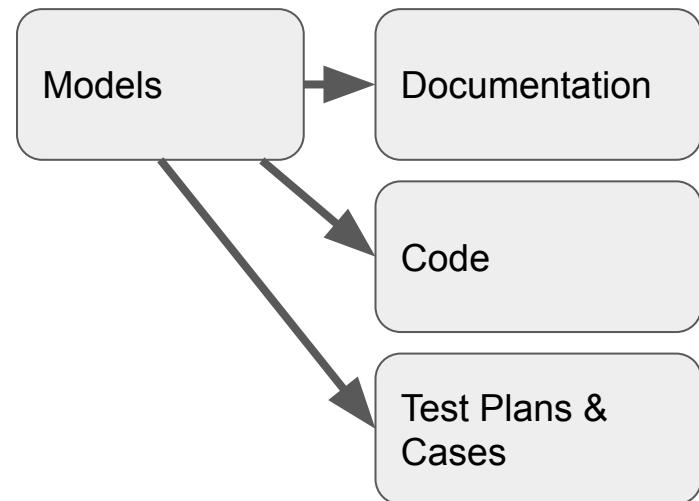

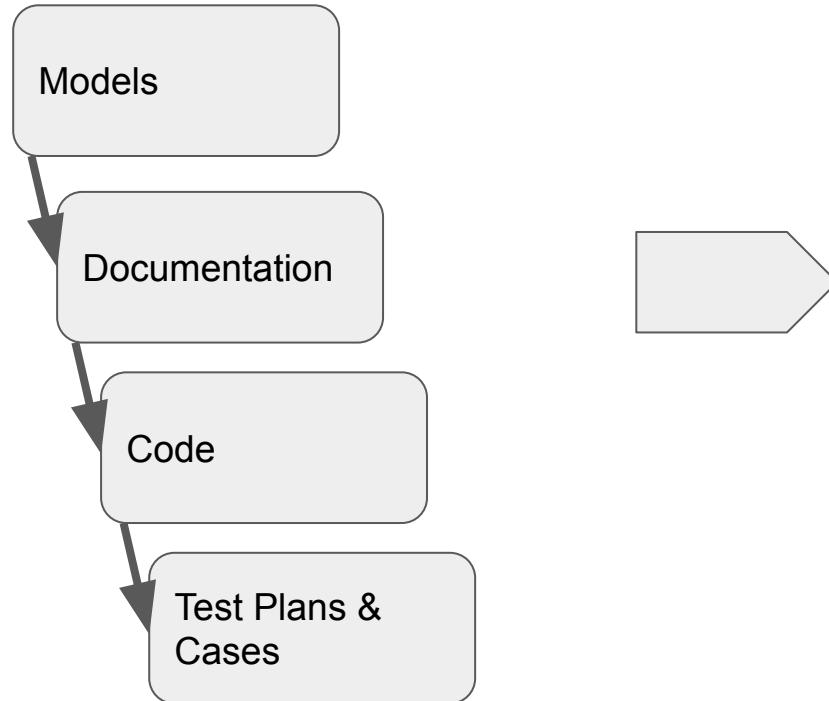

- 1: Example of End to End Jupyter Procedure
 - 1.1 Save Notebook as an asrun

Model Driven instead of Document Driven for System to Software

Engineering Workstations

- Applications
 - LENG
 - WENG
- Cloud engineering Linux and Windows workstations that can be accessible in JPL network.

LENG and WENG

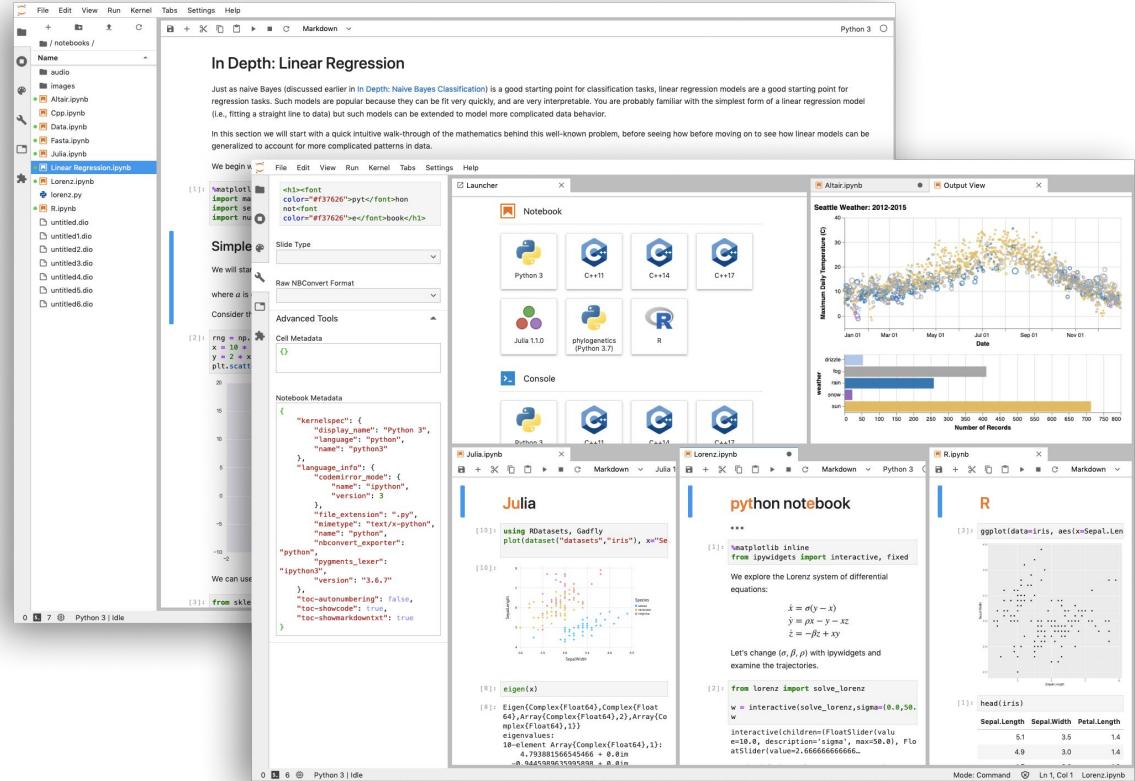

What can I do with Jupyter?

- Capture entire computing process
- Develop and execute code in a variety of languages
- Document and communicate results in-line with code
- Connect Models and Data

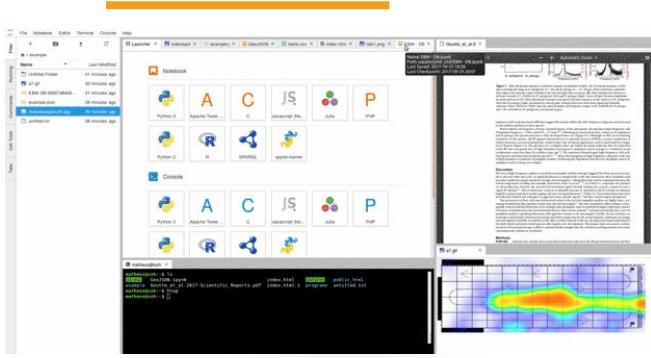

What is JupyterLab?

Interactive, exploratory,
browser-based computing
environment for:

- engineering
- data science
- scientific computing
- ML/AI
- and so much more...

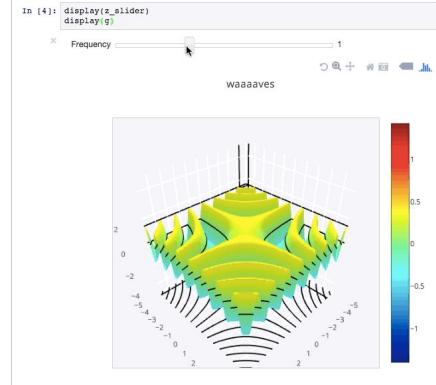

JupyterLab Features

Rich engineering narrative

Feature rich and integrated computational environment

Notebooks as reproducible and executable reports

Interactive & visual

Live code, narrative text, equations (LaTeX), images, visualizations, audio, video, widgets

A screenshot of the JupyterLab interface showing a grid of supported languages. Each language has a logo and a name: Java [java], Javascript (Node.js), Julia [julia], MATLAB [matlab], Octave [octave], OpenModelica [openmodelica], Python [python2], Python [python3], R [r], Robot Framework, Scala [scala], and SPARQL [sparql]. Below this is a code cell showing a Fourier transform calculation. The input cell shows the code `from IPython.display import Math` and `Math(r'F(k) = \int_{-\infty}^{\infty} f(x) e^{2\pi i k} dx')`. The output cell shows the resulting formula
$$F(k) = \int_{-\infty}^{\infty} f(x) e^{2\pi i k} dx$$
.

Widely popular & supported

~100 programming languages supported

Millions of public notebooks on GitHub to find inspiration

SysML v2 Submission Team

- A broad team of end users, vendors, academics, and government liaisons
 - Currently over **160** members from **71** organizations
- Driven by RFP requirements and user needs
- Developing submissions to both SysML v2 language and API RFPs

The SysML v2 Submission Team after a productive week collaborating on the specification at the OMG Technical Meeting, Long Beach. (Dec 2019)

OpenMBEE Updates

- New home with NumFOCUS
- First *International* Workshop on OpenMBEE at MODELS 2020 on October 19, 2020

Register @

<https://www.openmbee.org/models2020>

- Architecture in development simplifies software operations while adding new capabilities

OpenMBEE is now a NumFOCUS Sponsored Project

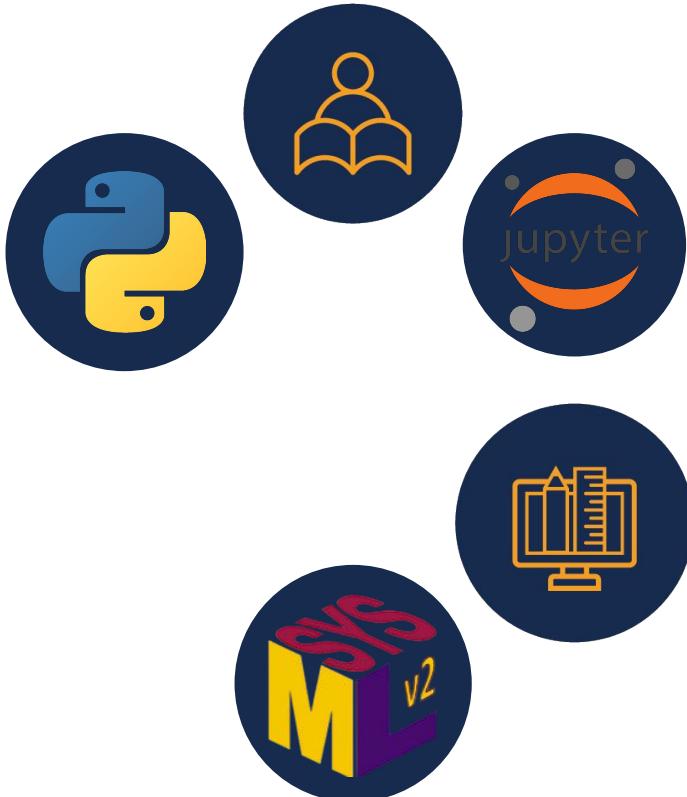

OpenMBEE Vision

- Unlock value through commoditization
 - Open / Inner source
 - Discoverable
 - Searchable
 - Learnable
- Provide a standards powered engineering platform using SysML v2 + API & Services

OpenMBEE Vision

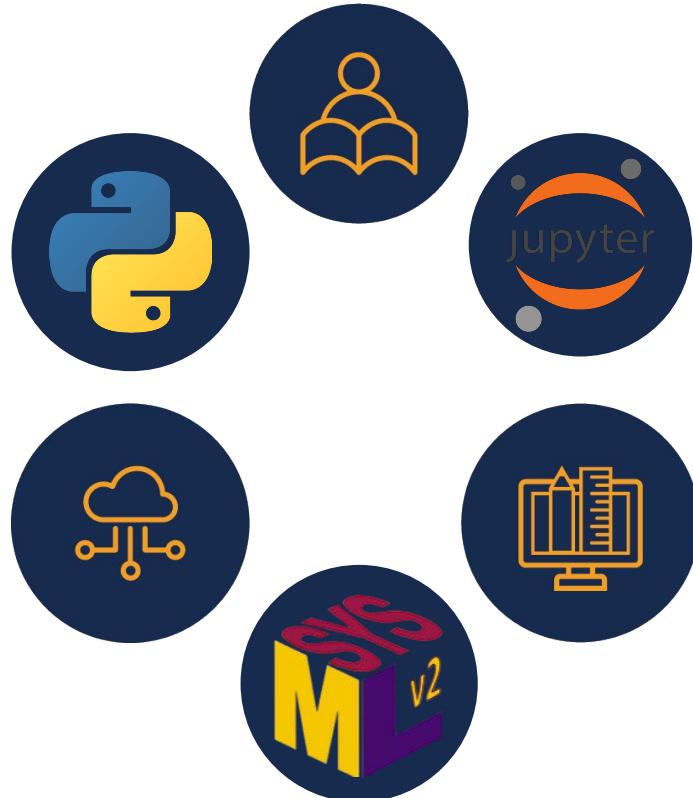

- Marry the ubiquity and popularity of programming languages, e.g. Python, with the rigor and durability of systems modeling
- Augment Jupyter's multi-language analysis capabilities with modeling and connected engineering

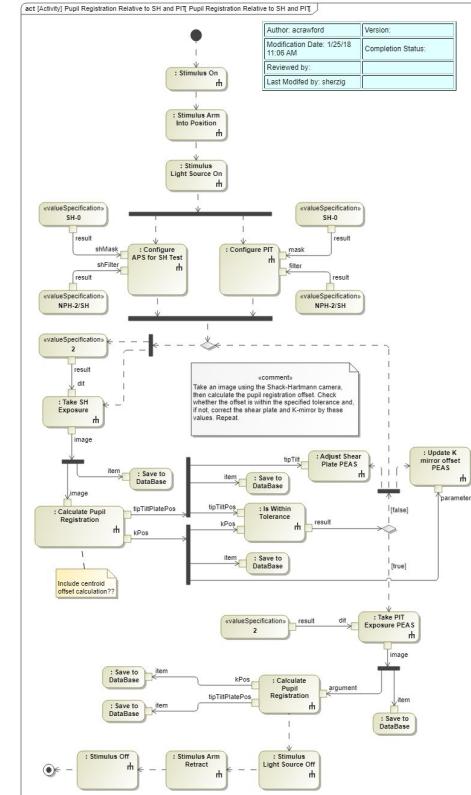

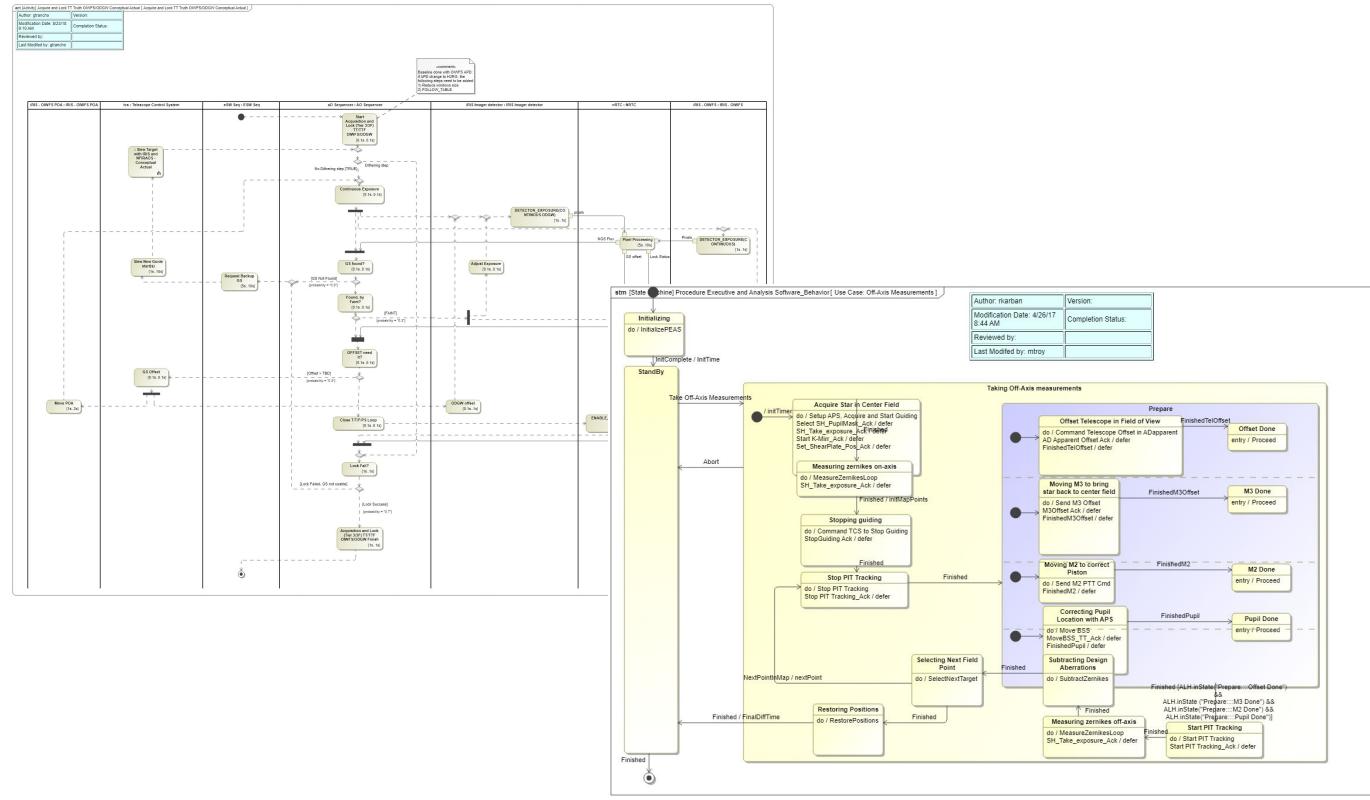

OpenMBEE Vision

- Enable novel data-driven analyses with advanced capabilities, as a service
 - graph querying
 - distributed computing
 - real time collaboration

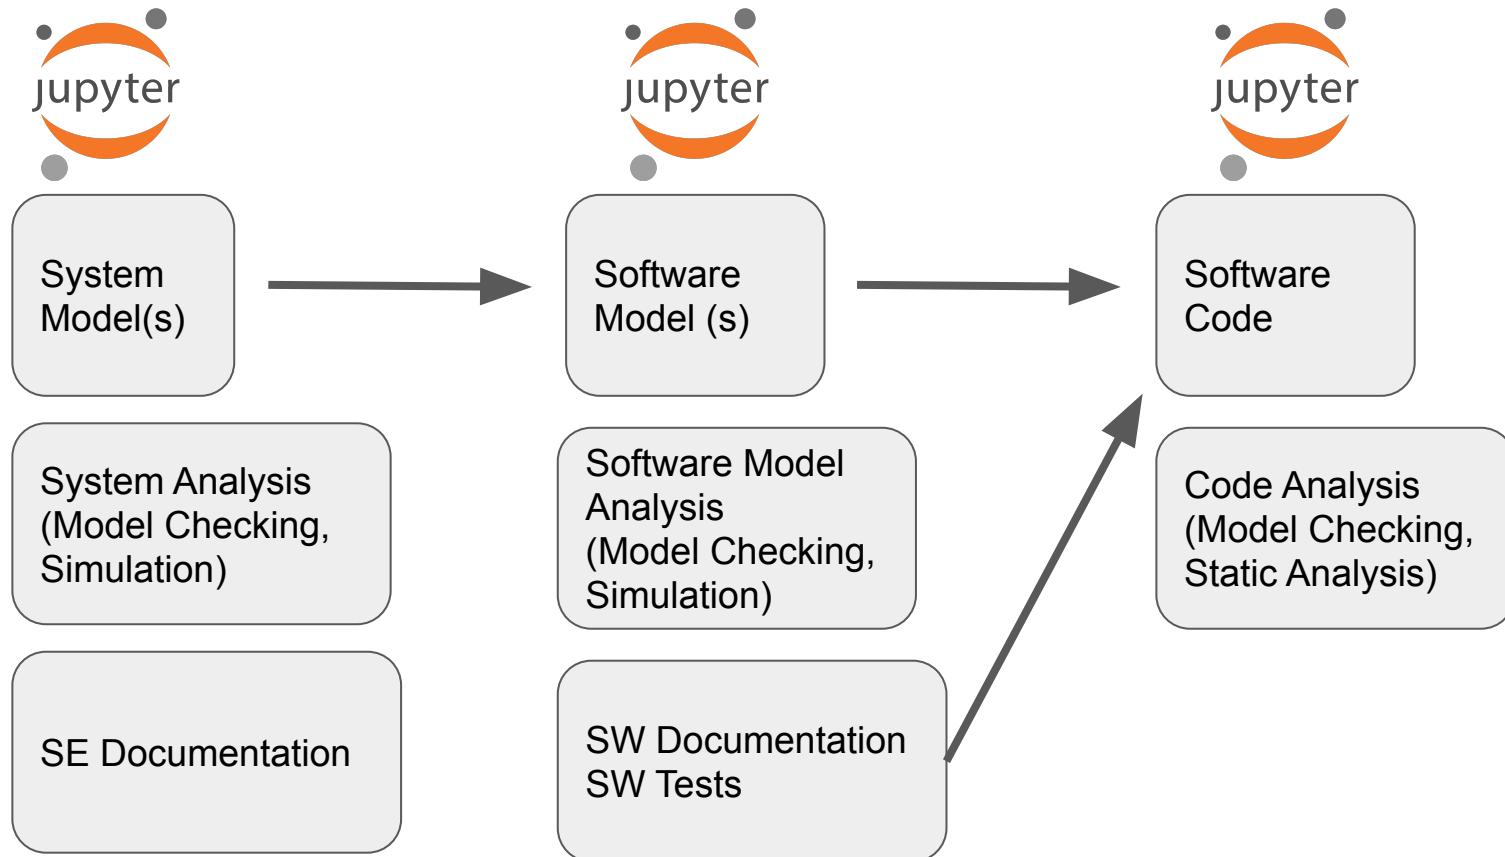

Join the community in making this vision
into a reality @ openmbee.org

Thirty Meter Telescope Digital Twin - Behavior modeling for executability and auto-coding

Semantic consistency across life-cycle and tool-chain

Evolving Cloud Compute Services for Systems and Software

- 200+ servers in the cloud
- 1,000+ volumes totaling 170+ TB
- 1000+ users
- 20 supported flight projects
- 60 apps and services
- Full Test String - Test, Integration, User Acceptance, Production
- Managed Services
- Software as a Service

The Line in partnership with CAE offers project and domain specific adaptations

- CAE provides the same environment to all its customers (engineers and scientists)
- Embedded roles work directly on projects to adapt the standard environment specific to the project goals or methodology
- This includes but is not limited to:
 - Project specific integrations
 - Project specific configurations
 - Project specific customizations
- Embedded roles capture user needs in general case studies which inform the CAE architecture
- This has been demonstrated for example on M2020, Europa Lander, Europa Clipper, Psyche, Mars Sample Return, Thirty Meter Telescope

Engage the User Community through the Technical Working Groups TWGs

- Technical Working Groups are a **forum for practitioners concerns**
Projects and line stakeholders, vendors
- For Engineering **Environment** and **key tools**
- Participate in identifying **use cases, workflows, issues, and roadmaps**
- Regular meetings **engaging stakeholders** and **vendors**
